Key to terms

Royalty statement fields: Product Line, License Type and Distribution Channel

The Product Line, License Type and Distribution Channel fields replace the Channel ID codes used in the old statement format. They tell you what was sold, how it can be used and how it was sold.

Product Line

The type of product or revenue stream a royalty comes from.

Product Line	Meaning
Portal	Royalties from Monotype Subscription Offerings, which include Monotype Fonts and Monotype Connect. These royalties are calculated using the Monotype Subscription Offerings royalty model.
Non-Portal	A named font license: the customer licensed specific fonts, which were listed on the invoice. This is how Monotype sold fonts before Monotype Subscription Offerings.
Past Usage	License fees Monotype has charged a customer for using your fonts in a prior period without the right license, for example following a license compliance review. Also called a retroactive license fee or infringement.
FlipFont	Royalties from FlipFont, which lets users change the system font on their mobile devices. Monotype sub-licenses fonts to FlipFont distributors, mainly Samsung and Google, who offer them in their Android font stores. You see a royalty when Monotype receives revenue from these distributors.
Fonts	Same as Non-Portal: a named font license for specific fonts. Both values are used in Monotype's internal systems.
Drivers	Fonts licensed for use in printer or device drivers.
iType	Fonts licensed for use with Monotype's iType font rendering engine in embedded devices, such as phones, cars and appliances.
Font Fusion	Fonts licensed for use with the FontFusion font rendering engine in embedded devices.

License Type

The type of use the customer licensed the font for. For more about common license types, see the Licensing article in the Monotype Fonts help center (support.monotype.com/en/articles/7872341-licensing).

License Type	Meaning
Desktop	Installing fonts on computers to create documents, designs and print materials.
Web Fonts	Using fonts on websites.
Apps	Embedding fonts in mobile or desktop applications.
Server	Installing fonts on servers, for example to generate documents or content automatically. This includes web, cloud-based and SaaS services.
Digital Ads	Using fonts in digital advertisements.
Embedded Documents	Embedding fonts in electronic documents such as PDFs or eBooks. This covers ePub use in electronic commercial publications.
FlipFont	Font licenses sold through FlipFont.
Drivers	Use in printer or device drivers.
ePub	Embedding fonts in ePub eBooks.
Fonts	Same as Desktop.
Games	Embedding fonts in video games.
iType	Use with Monotype's iType font rendering engine in embedded devices.
Other	License types not covered by the other categories.
WF Sub.	Web font subscriptions, such as the older hosted web font subscriptions from Fonts.com.
Web Annual	Same as Web Fonts.
App Annual	Same as Apps.
Web Digital Ad Annual	Same as Digital Ads.
ePub Annual	Same as ePub.
Company Desktop	Same as Desktop.

Distribution Channel

How the license was sold to the customer.

Distribution Channel	Meaning
Direct Sales	Licenses sold directly to customers by Monotype, including Monotype Subscription Offerings and enterprise agreements.
OEM Embedded	Fonts sub-licensed for embedding in physical products, for example fonts built into a printer, car or medical device.
OEM Software	Fonts sub-licensed for embedding in software products, for example an enterprise software platform.
Web Sales	Licenses bought online by customers through Monotype's e-commerce sites, such as MyFonts.com.
